Setting up MySQL on EC2

INF 551

Wensheng Wu

Install & start server

- Install
  - sudo yum install -y mysql55-server

- Start server
  - sudo service mysqld start

Create root account of MySQL

- mysqladmin -u root password root
  - Setting password of root to be "root"

- mysqladmin -u root password root -p
  - If you already created a password and would like to change it to "root"
  - When prompted, enter your old password

Create/drop a database

- mysql -h localhost -u root -p
  - It may also work without "-h localhost"

➢ create database inf551;

➢ show databases;

> drop database inf551; // in case you want to remove it

Create "beers" database

- Use script beers-table.sql (available on Blackboard in the same folder as this slide)

- mysql inf551 -u root -p < beers-tables.sql
